- OPERATIONAL SYSTEM FRAMEWORK
- EVALUATION METHODOLOGY
- PRELIMINARY RESULTS
- CONCLUDING REMARKS

INTRODUCTION

- The mesoescala atmospheric model MM5 is used to force a hydrodynamic model UCA2.5 (Izquierdo *et al.*, 2001) in the Strait of Gibraltar
- As a **prerequisite** for such studies, the atmospheric model has to be implemented and validated in the Strait of Gibraltar.
- A major part of such a **validation** is the comparison of simulation results with observational data and with the results from other models, which have been independently developed.
- In this study **72-hour simulated wind field with the MM5** at different resolutions (30 km, 10 km and 3.3 km) from the period 20-23 August 2004 has been compared and evaluated with the wind direction and intensity measurements from 6 automatic meteorological stations from the Spanish Meteorological National Institute within the model domain and with simulated wind field of **HIRLAM (0.2°)**

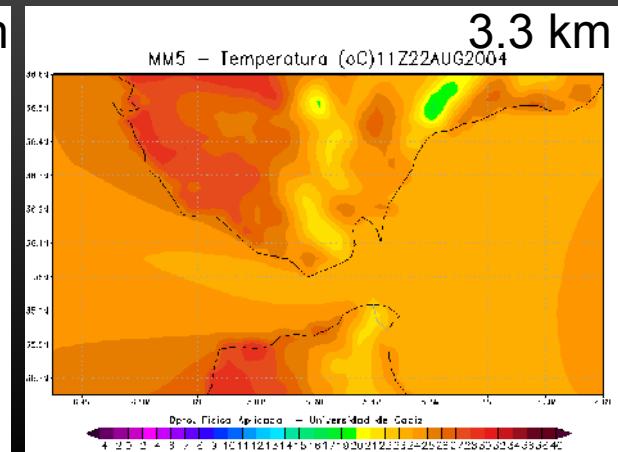

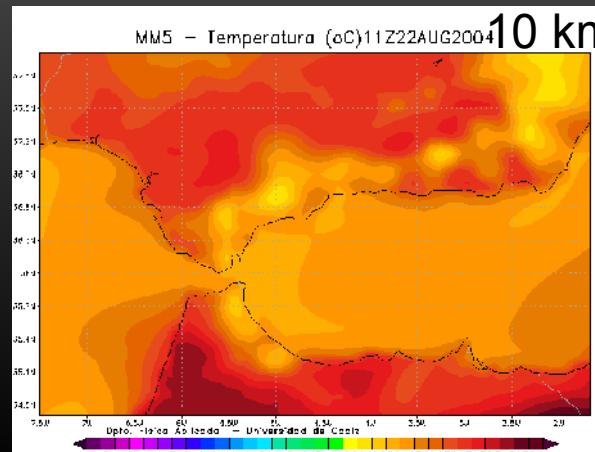

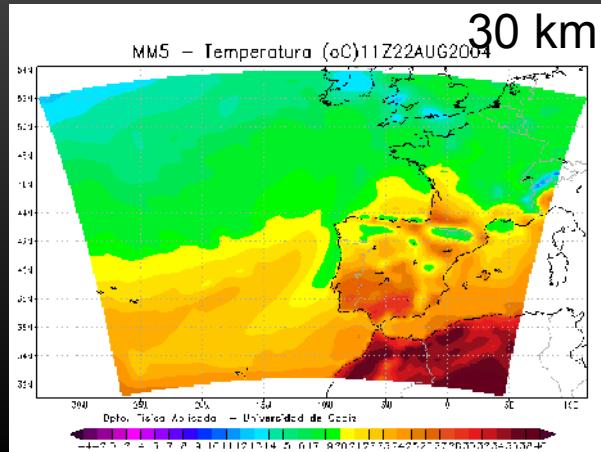

- **Principal aim: providing atmospheric forcing to hydrodynamic models in the local scale: Strait of Gibraltar.**
 1. Implementation of the high resolution model MM5 in the Gulf of Cadiz - Strait of Gibraltar and Alborán Sea system
 2. Creation of three domains with different resolutions (30, 10 and 3.3 km) in one way nesting
 3. Evaluation of atmospheric model: it starts with the wind field from the different domains

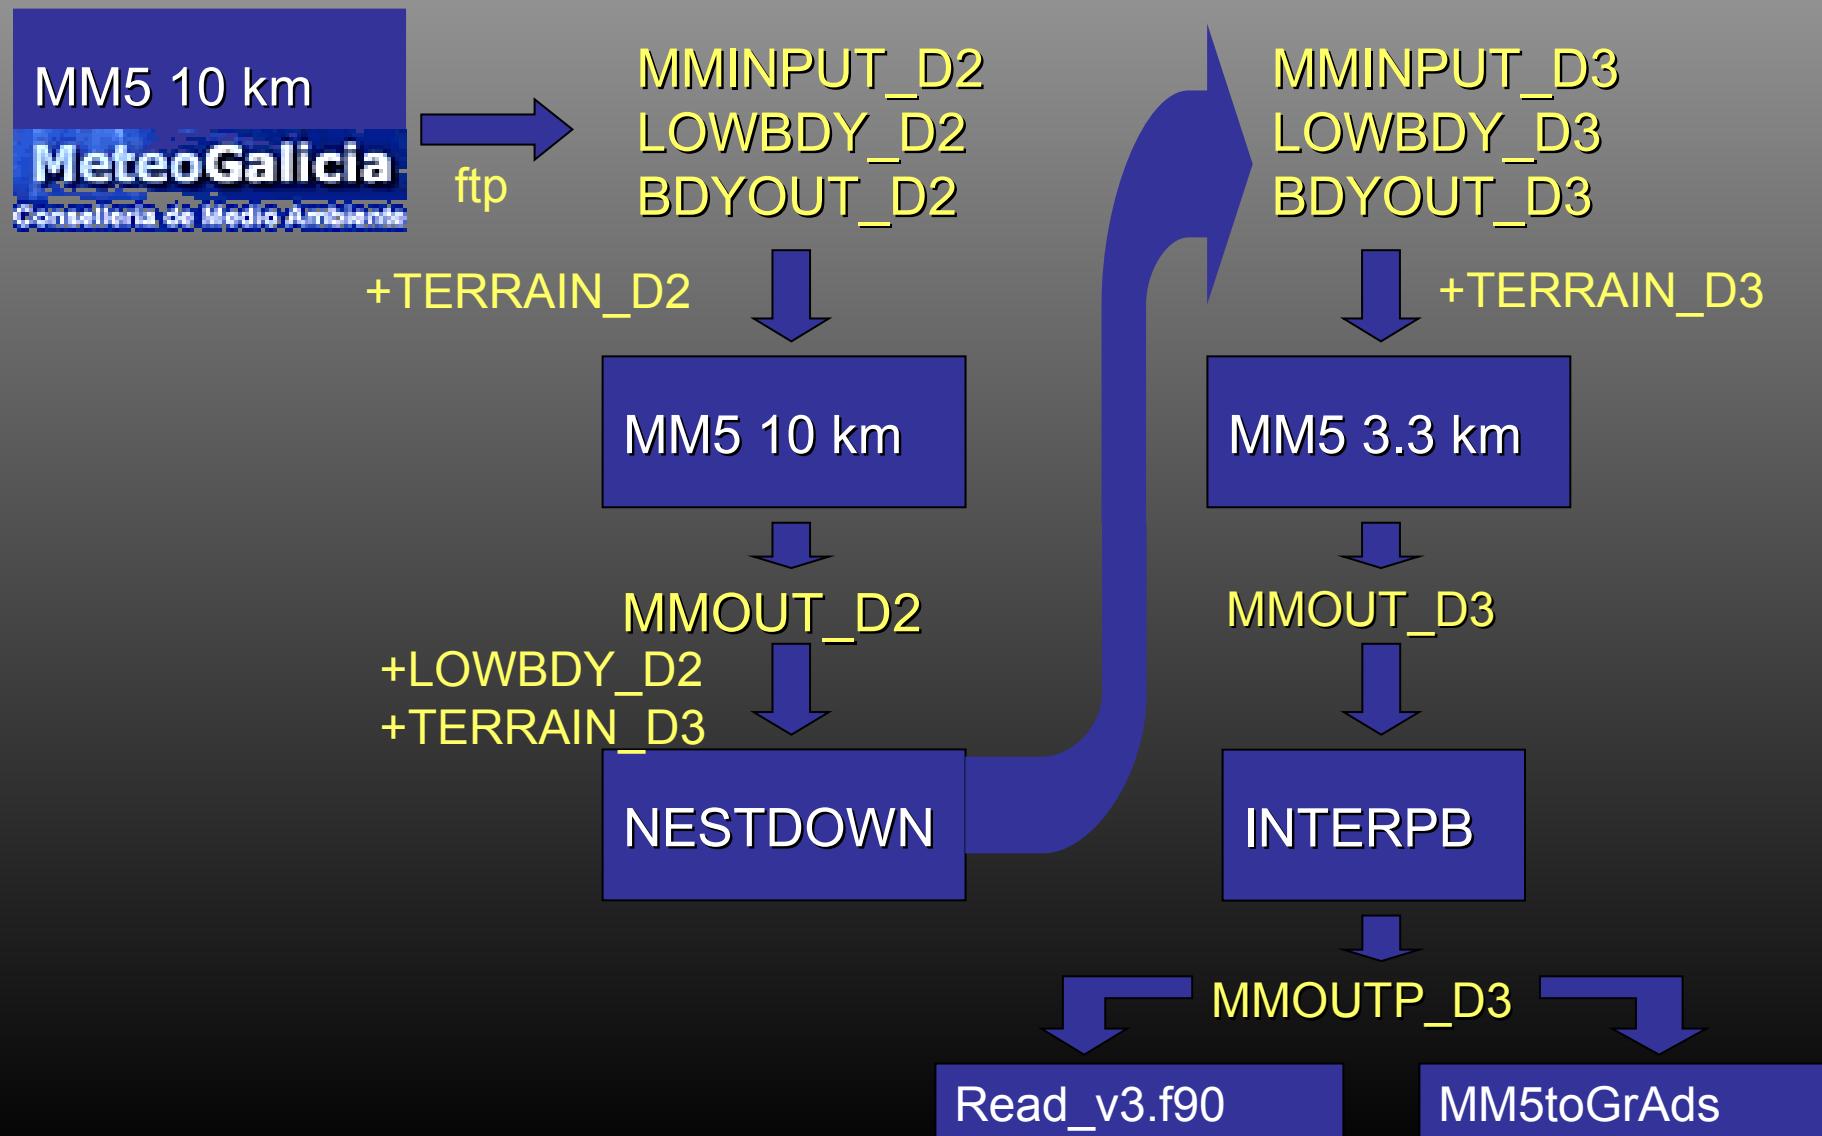

MM5 IMPLEMENTATION

RUNNING MM5

Nº domains	1	2	3
Resolution (km)	30	10	3.3
Input data resolution (km)	4	0.9	0.9
Nesting	1 way	1 way	1 way
Vertical levels	35	35	35
Time step (seconds)	90	30	10

OPERATIONAL SYSTEM FRAMEWORK

EVALUATION METHODOLOGY

MM5 vs. OBSERVATIONS MM5 vs. HIRLAM 0.2°

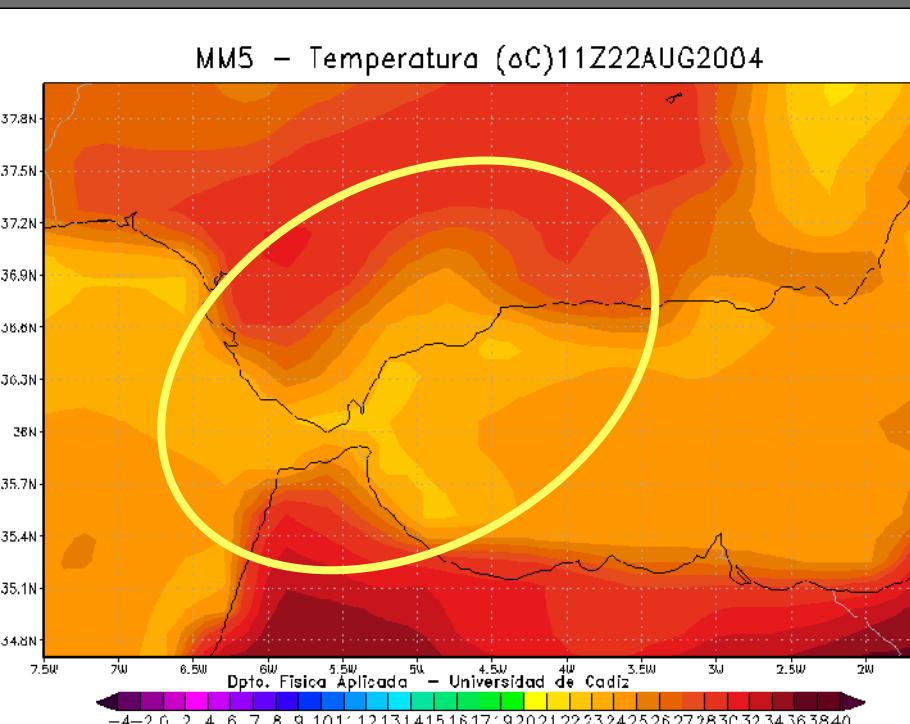

Location of the automatic
meteorological stations INM

STATION NAME	UTC TIME	OFFICIAL TIME
ALTITUDE (m)		
TEMPERATURE (C)		
RELATIVE HUMIDITY		
ACCUMULATED PRECIPITATION		
WIND INTENSITY (km/h)		
WIND DIRECTION (degrees)		
MAX. WIND INTENSITY (km/h)		
PRESSURE (mb)		

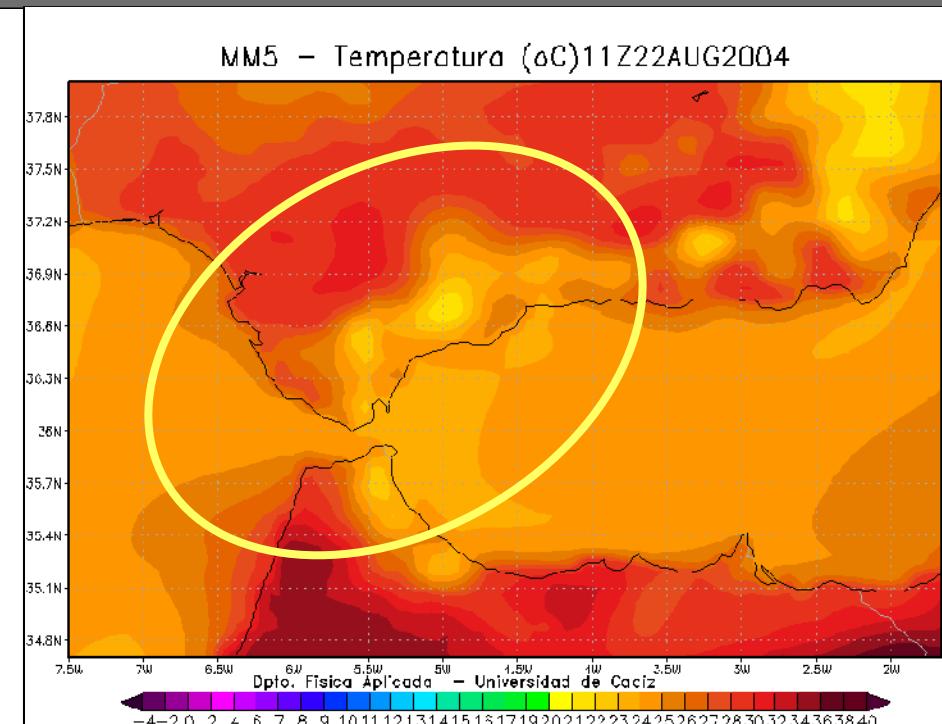

Observed data from A.M.S.

PRELIMINARY RESULTS

2m TEMPERATURE (°C)

DOMAIN 1 = 30 km

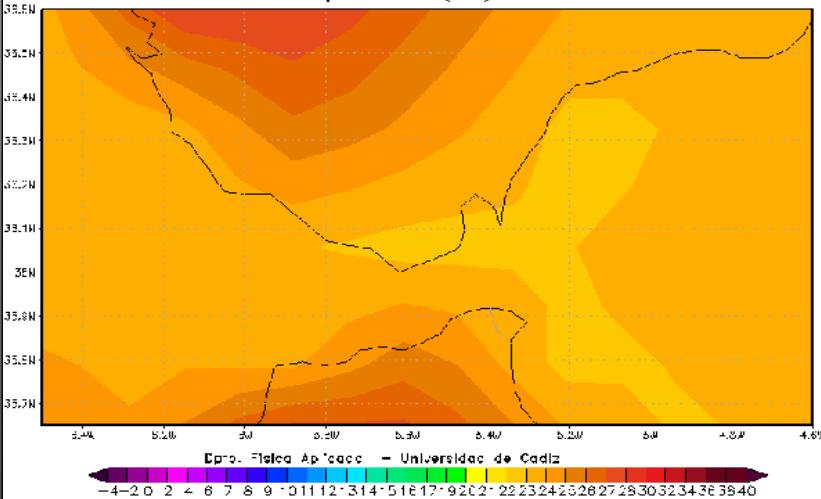

DOMAIN 2 = 10 km

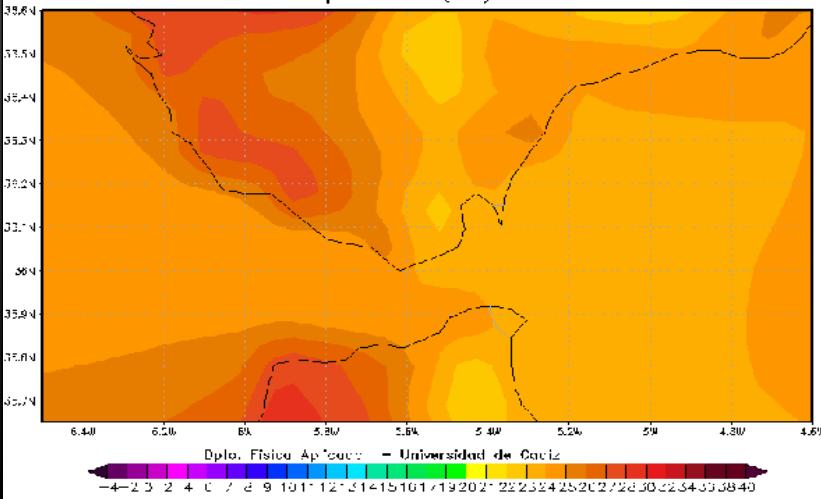

PRELIMINARY RESULTS

DOMINIO 1 = 30 km

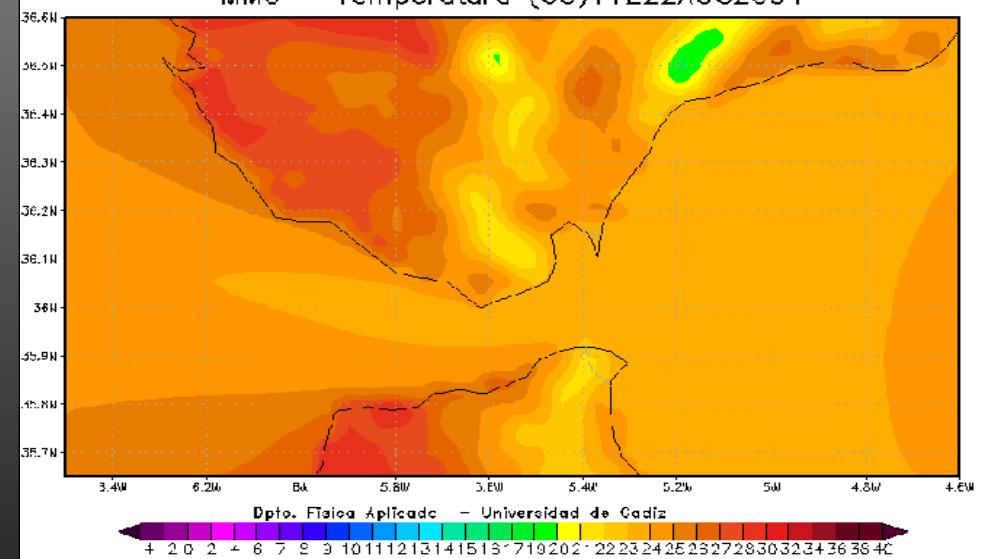

MM5 – Temperatura (°C) 11Z22AUG2004

**DOMINIO 2 = 10 km**

MM5 – Temperatura (°C) 11Z22AUG2004

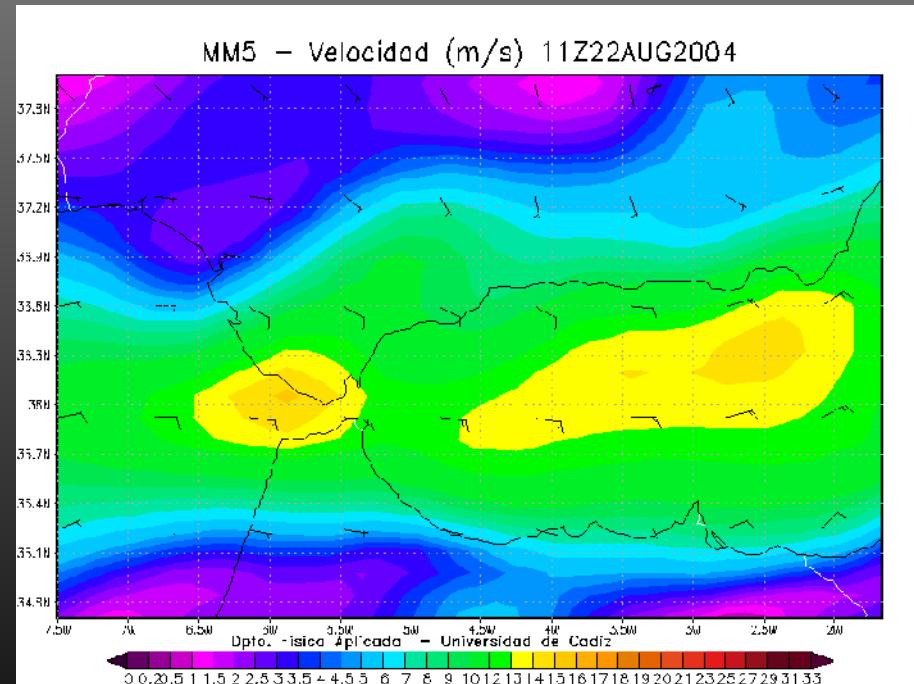

**2m TEMPERATURE (°C)****DOMINIO 3 = 3.3 km**

MM5 – Temperatura (°C) 11Z22AUG2004

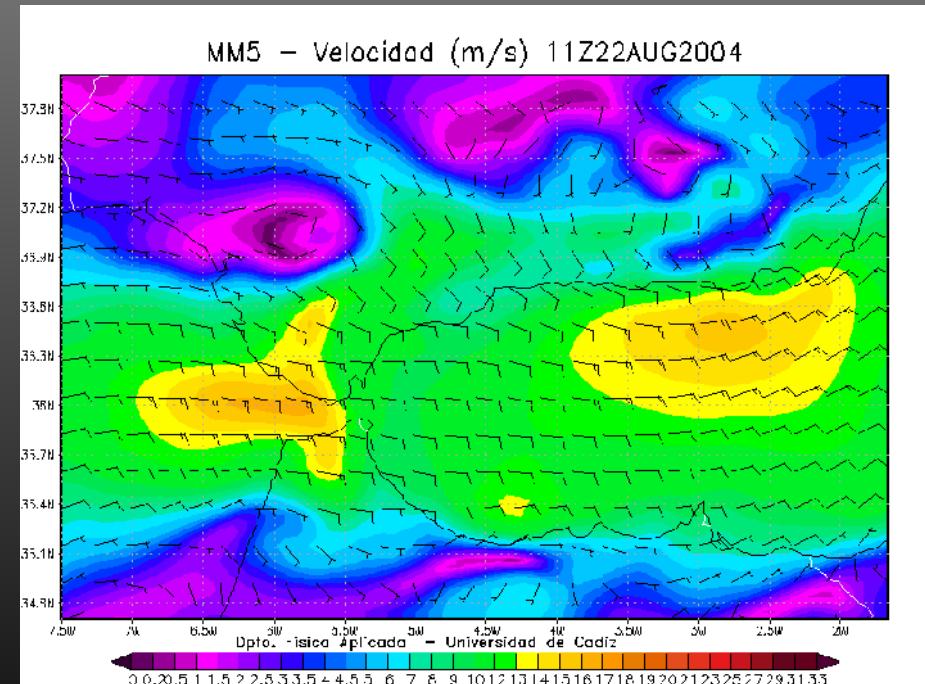

PRELIMINARY RESULTS

10 m WIND SPEED (m/s)

DOMAIN 1 = 30 km

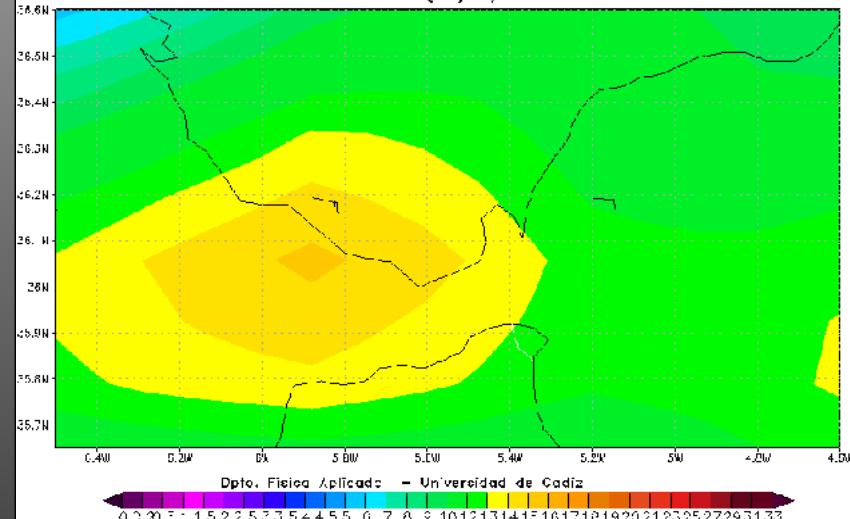

DOMAIN 2 = 10 km

PRELIMINARY RESULTS

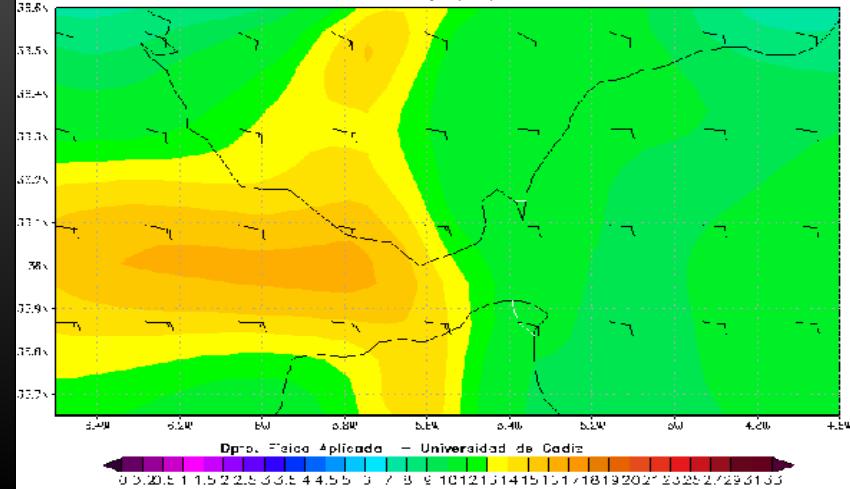

DOMINIO 1 = 30 km

MM5 – Velocidad (m/s) 11Z22AUG2004

DOMINIO 2 = 10 km

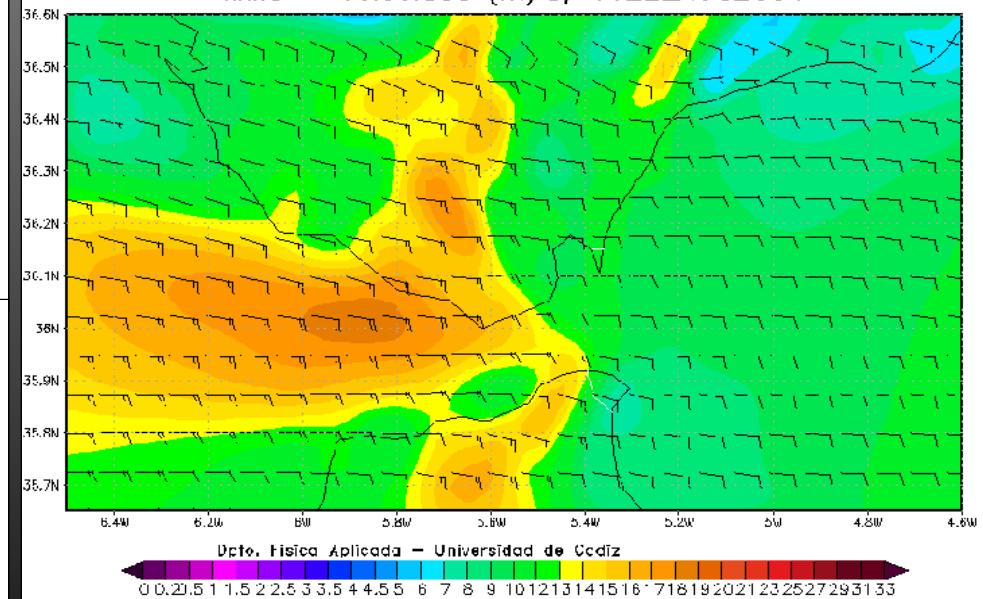

MM5 – Velocidad (m/s) 11Z22AUG2004

10 m WIND SPEED (m/s)

DOMINIO 3 = 3.3 km

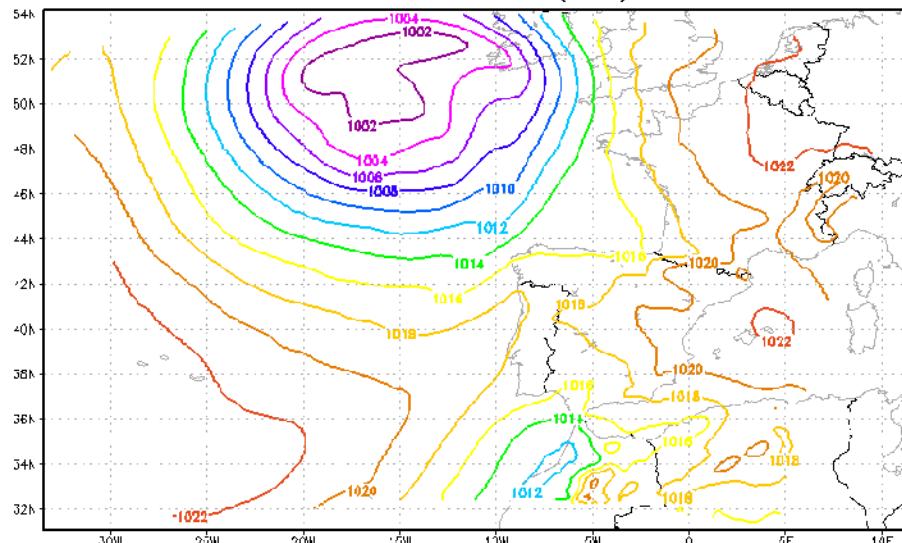

MM5 – Velocidad (m/s) 11Z22AUG2004

PRELIMINARY RESULTS

SEA LEVEL PRESSURE (hPa)

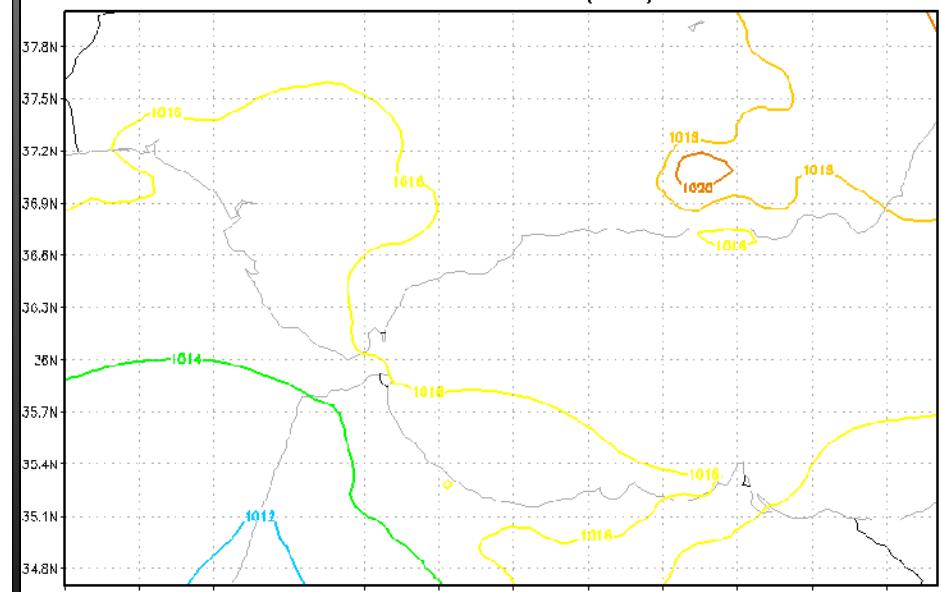

MM5 – Presion a nivel del mar (hPa) 11Z22AUG2004

Dpto.Física Aplicada – Universidad de Cádiz

DOMAIN 1 = 30 km

MM5 – Presion a nivel del mar (hPa) 11Z22AUG2004

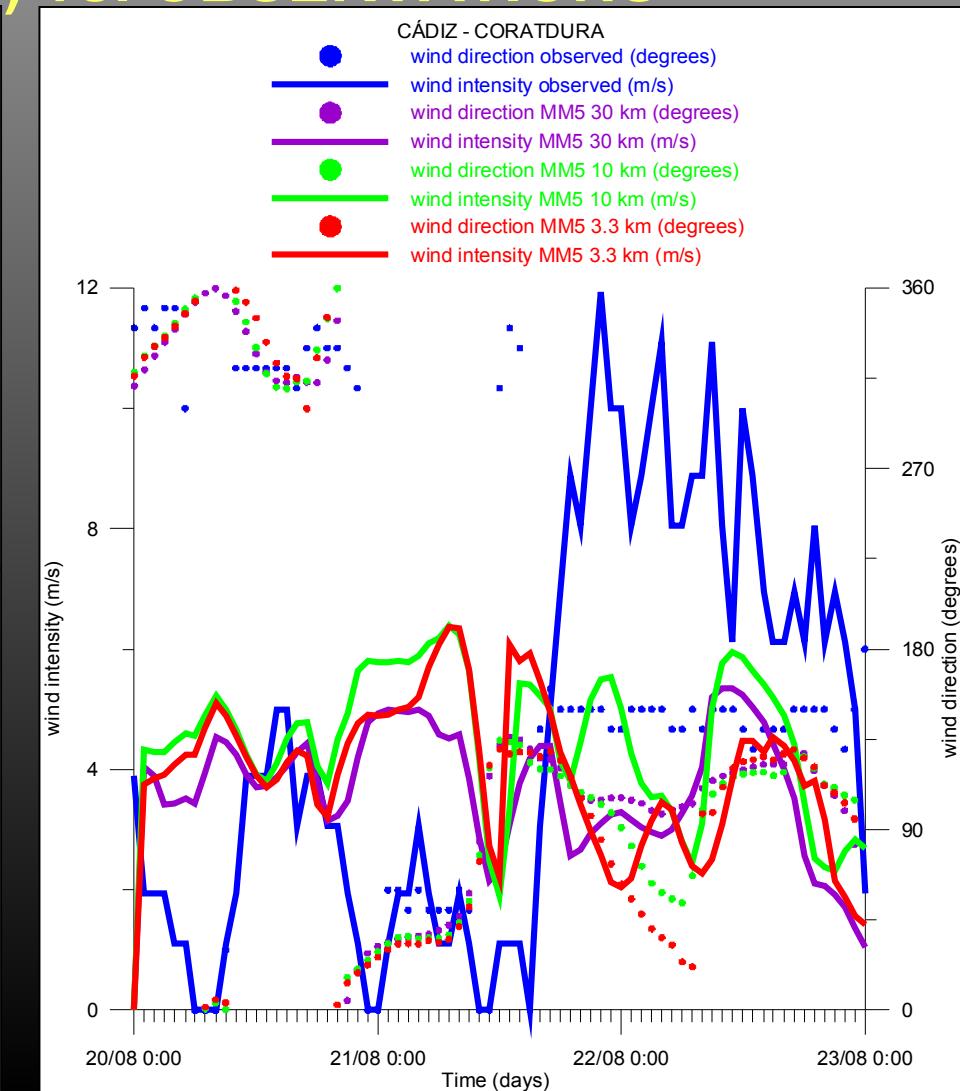

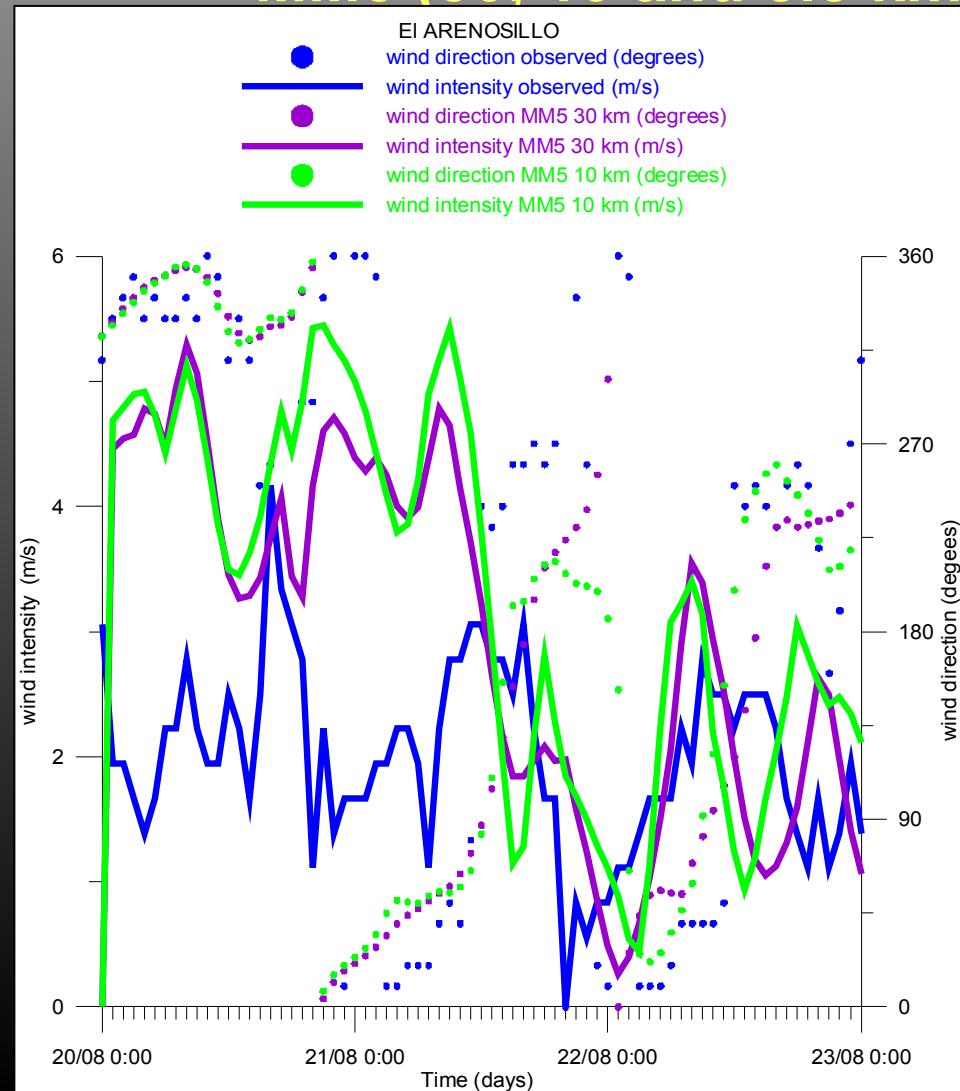

Dpto.Física Aplicada – Universidad de Cádiz

DOMAIN 2 = 10 km

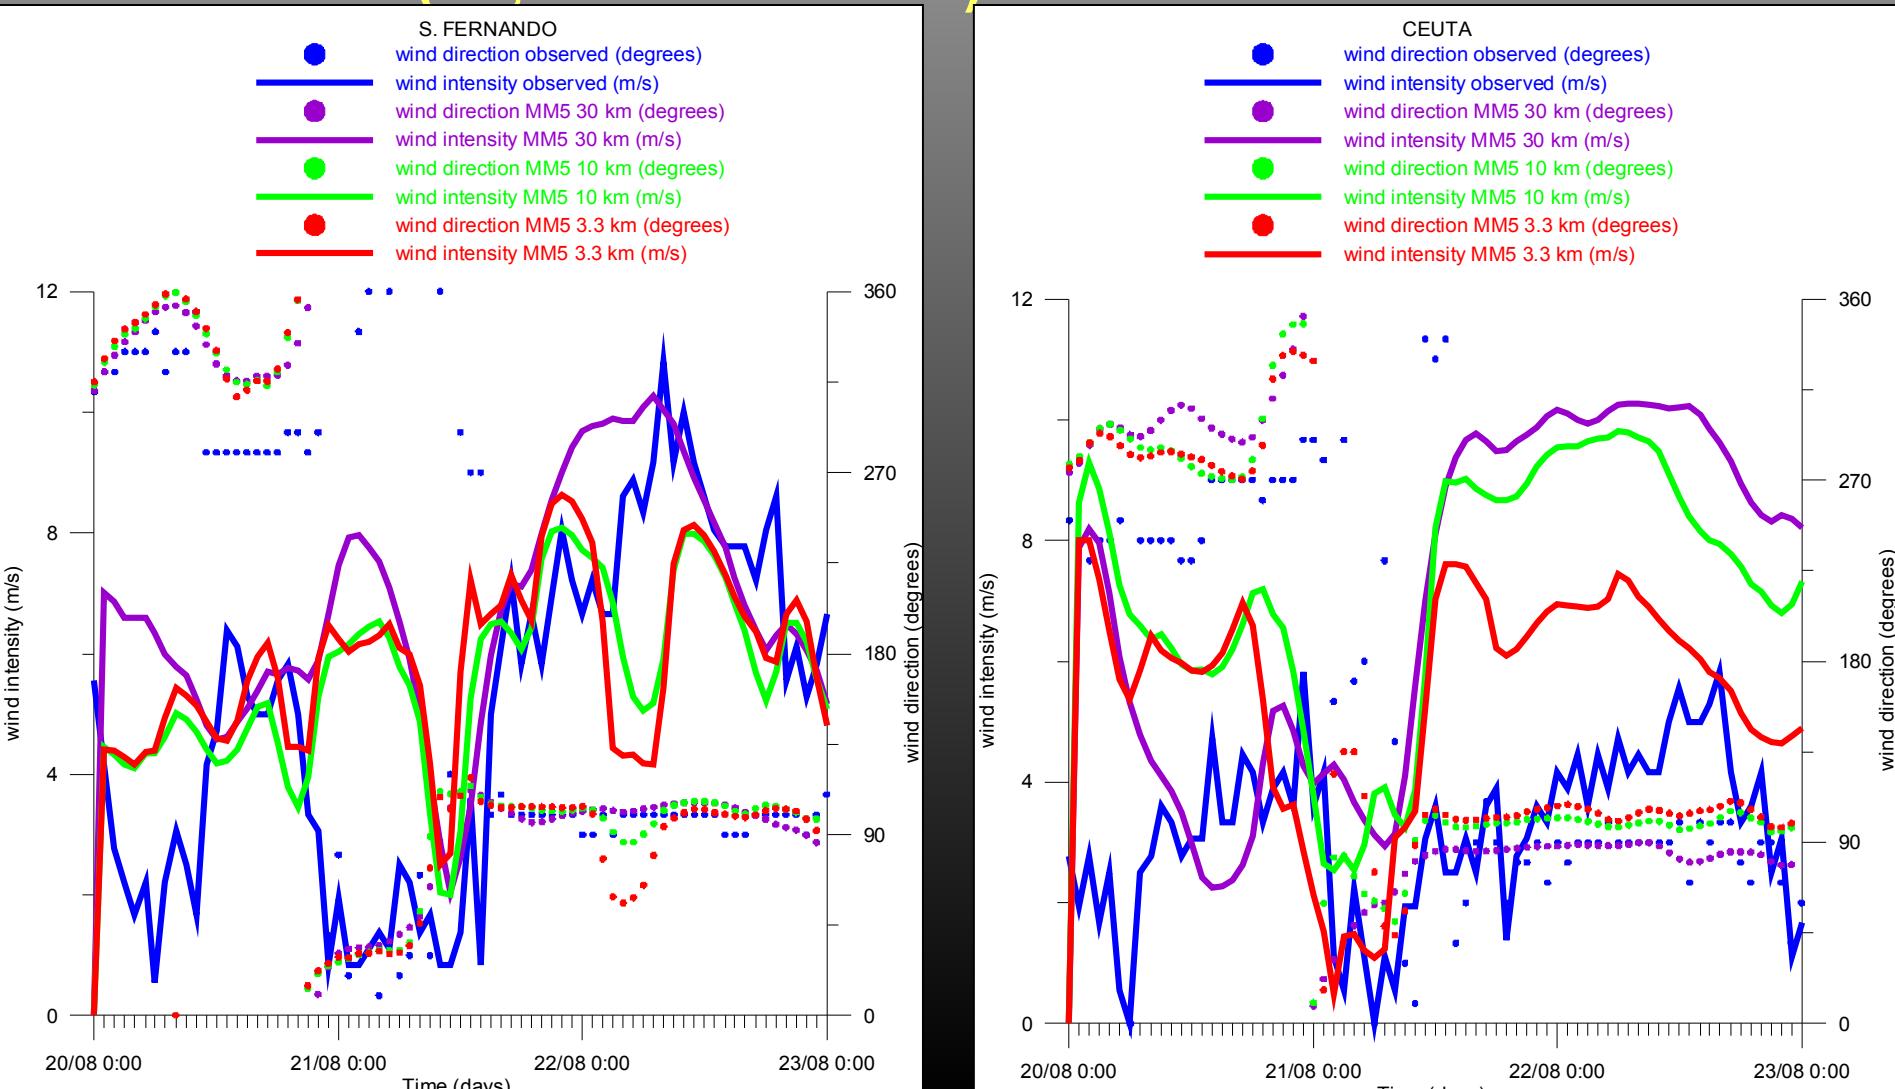

PRELIMINARY RESULTS

EVALUATION OF THE 10 m WIND SPEED (m/s) MM5 (30, 10 and 3.3 km) vs. OBSERVATIONS

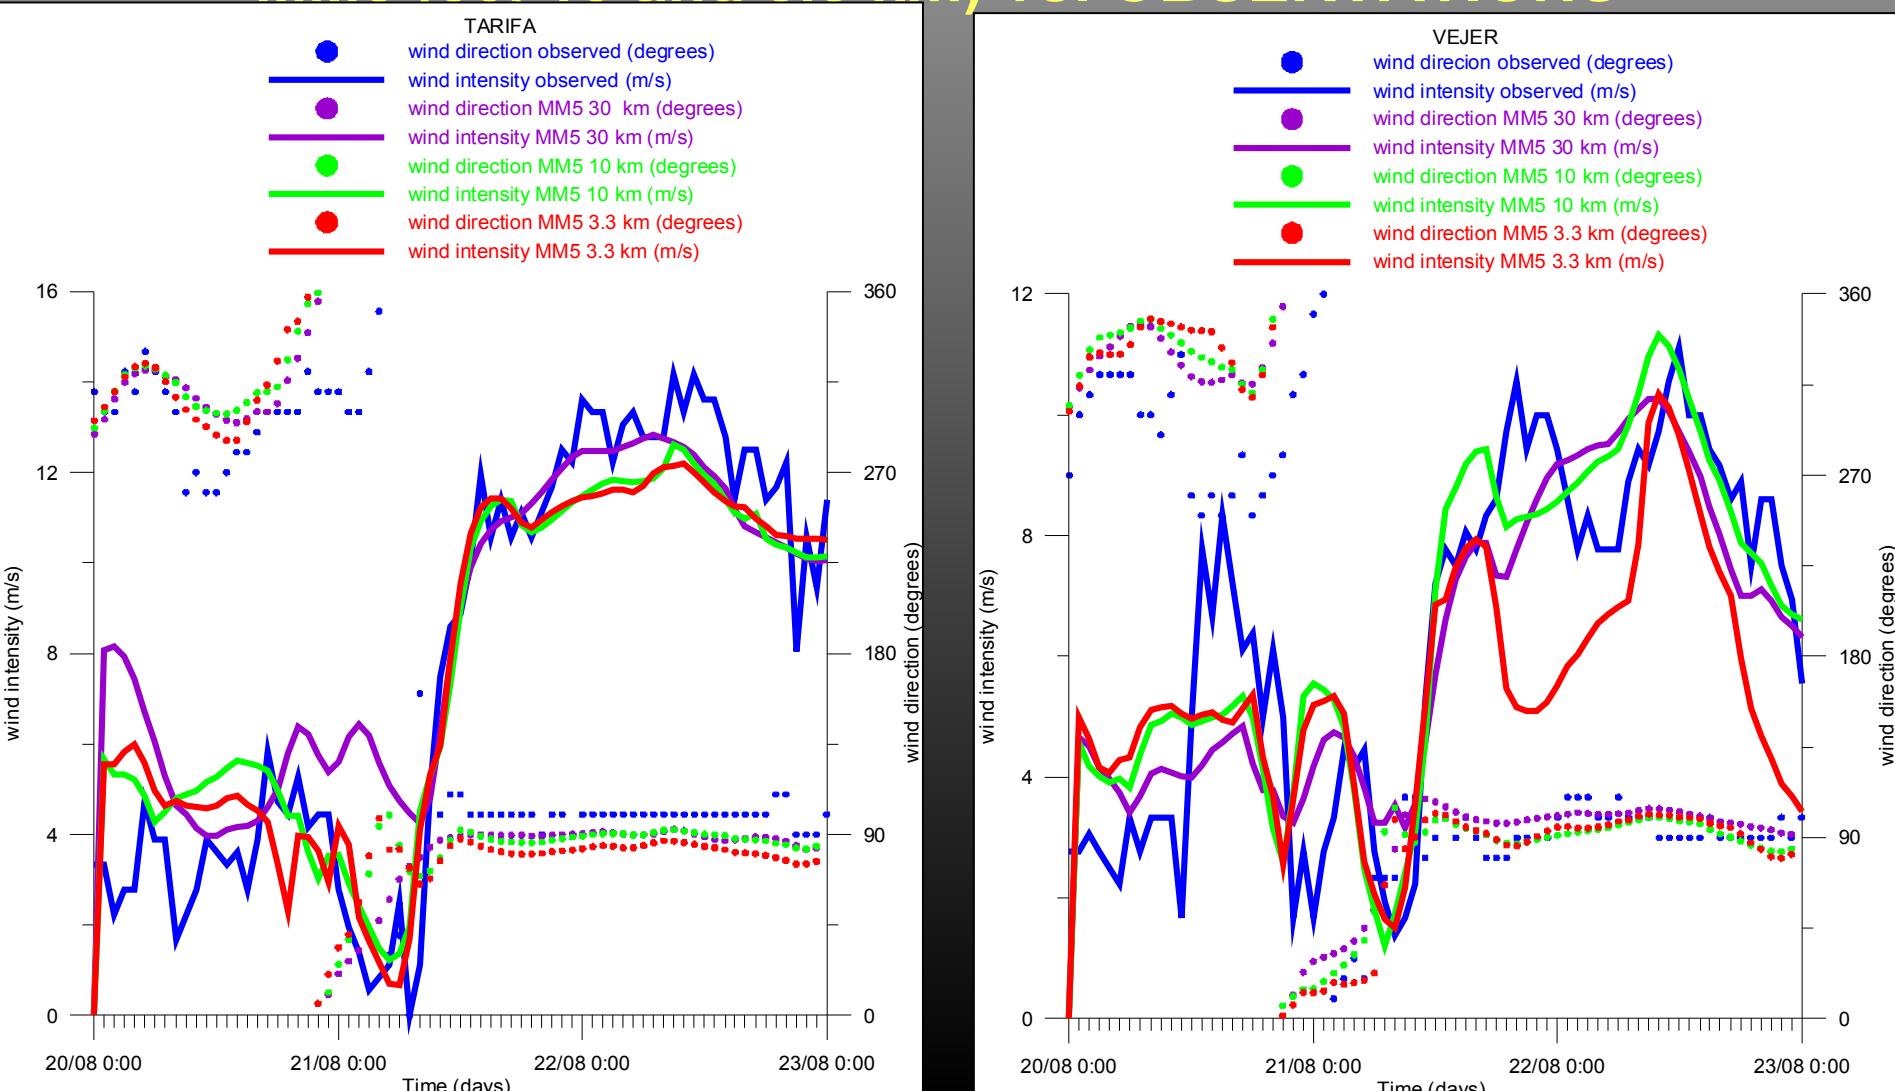

PRELIMINARY RESULTS

EVALUATION OF THE 10 m WIND SPEED 10 m (m/s) MM5 (30, 10 and 3.3 km) vs. OBSERVATIONS

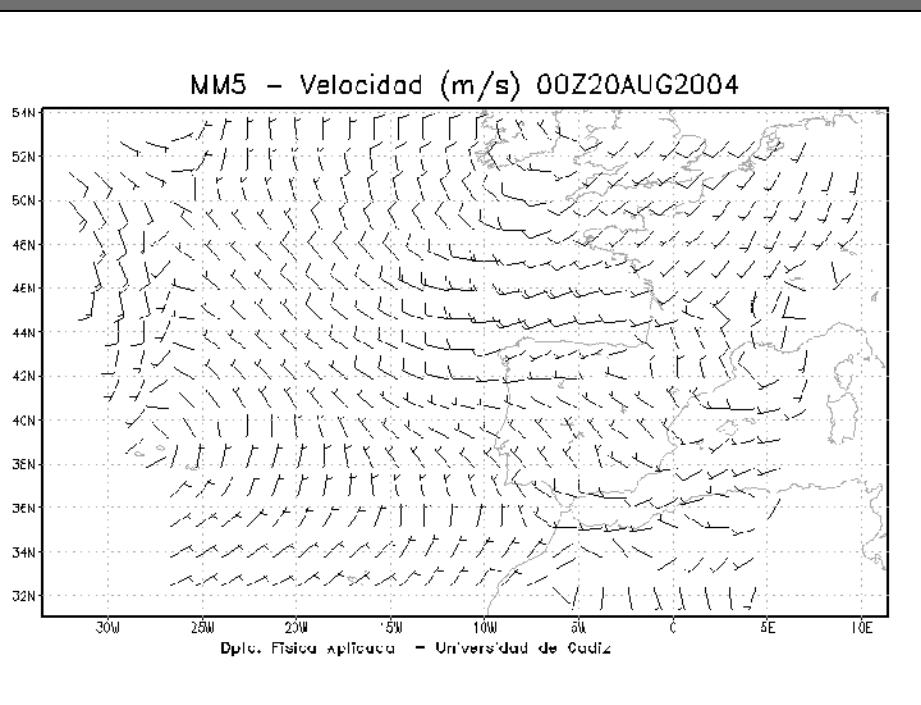

PRELIMINARY RESULTS

EVALUATION OF THE 10 m WIND SPEED (m/s) MM5 (30, 10 and 3.3 km) vs. OBSERVATIONS

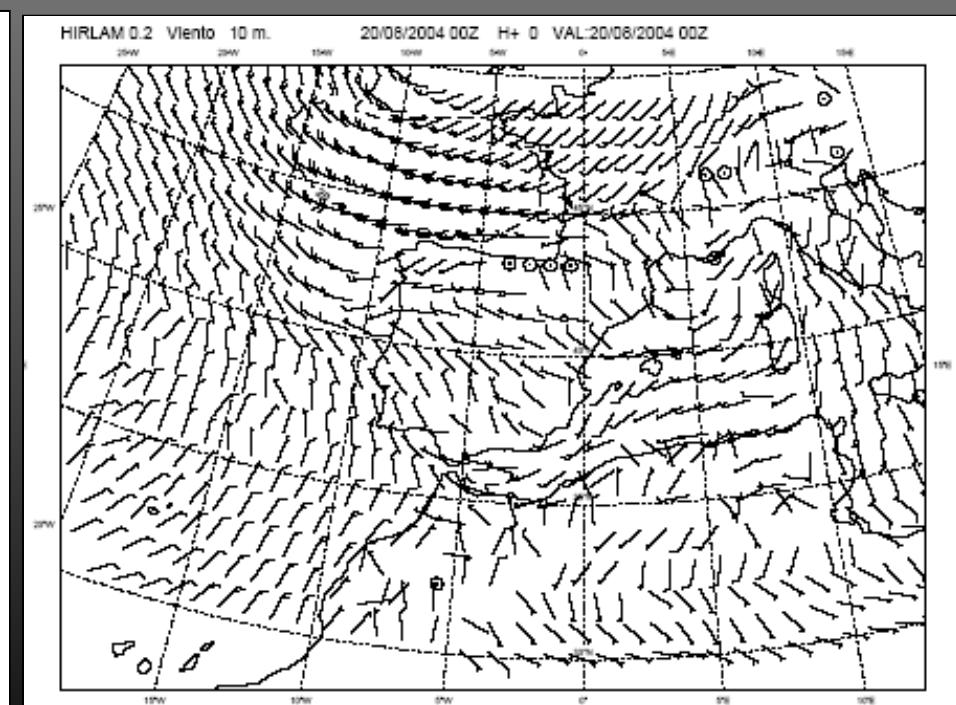

PRELIMINARY RESULTS

EVALUATION OF THE 10 m WIND SPEED (m/s) MM5 (30 km) vs. HIRLAM (0.2 °) 20/08/2004 00:00

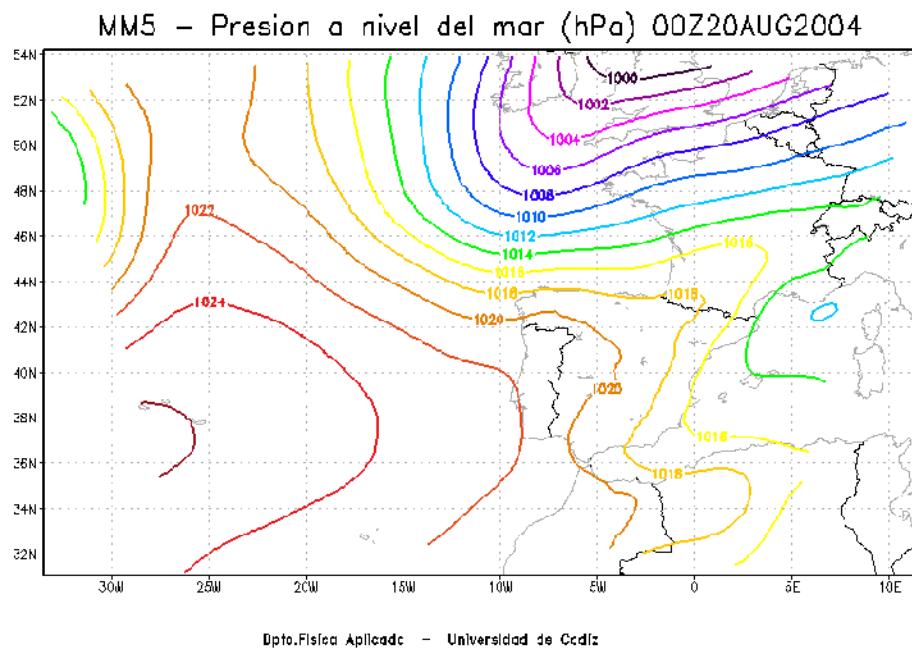

DOMAIN 30 km MM5

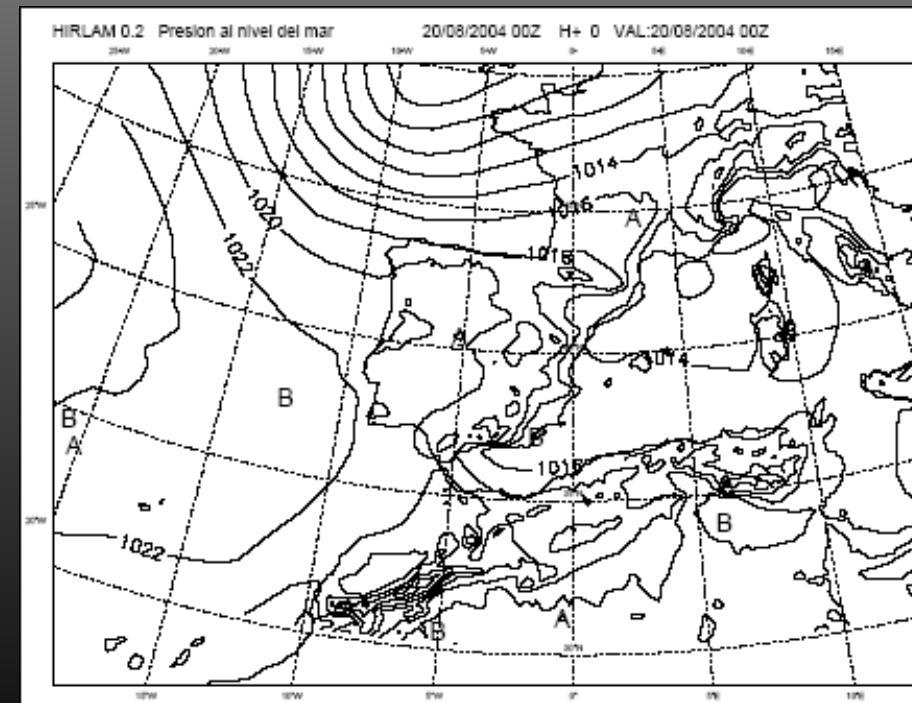

DOMAIN 0.2 HIRLAM (INM)

PRELIMINARY RESULTS

EVALUATION OF THE SEA LEVEL PRESSURE (hPa) MM5 (30 km) vs. HIRLAM (0.2°) 20/08/2004 00:00

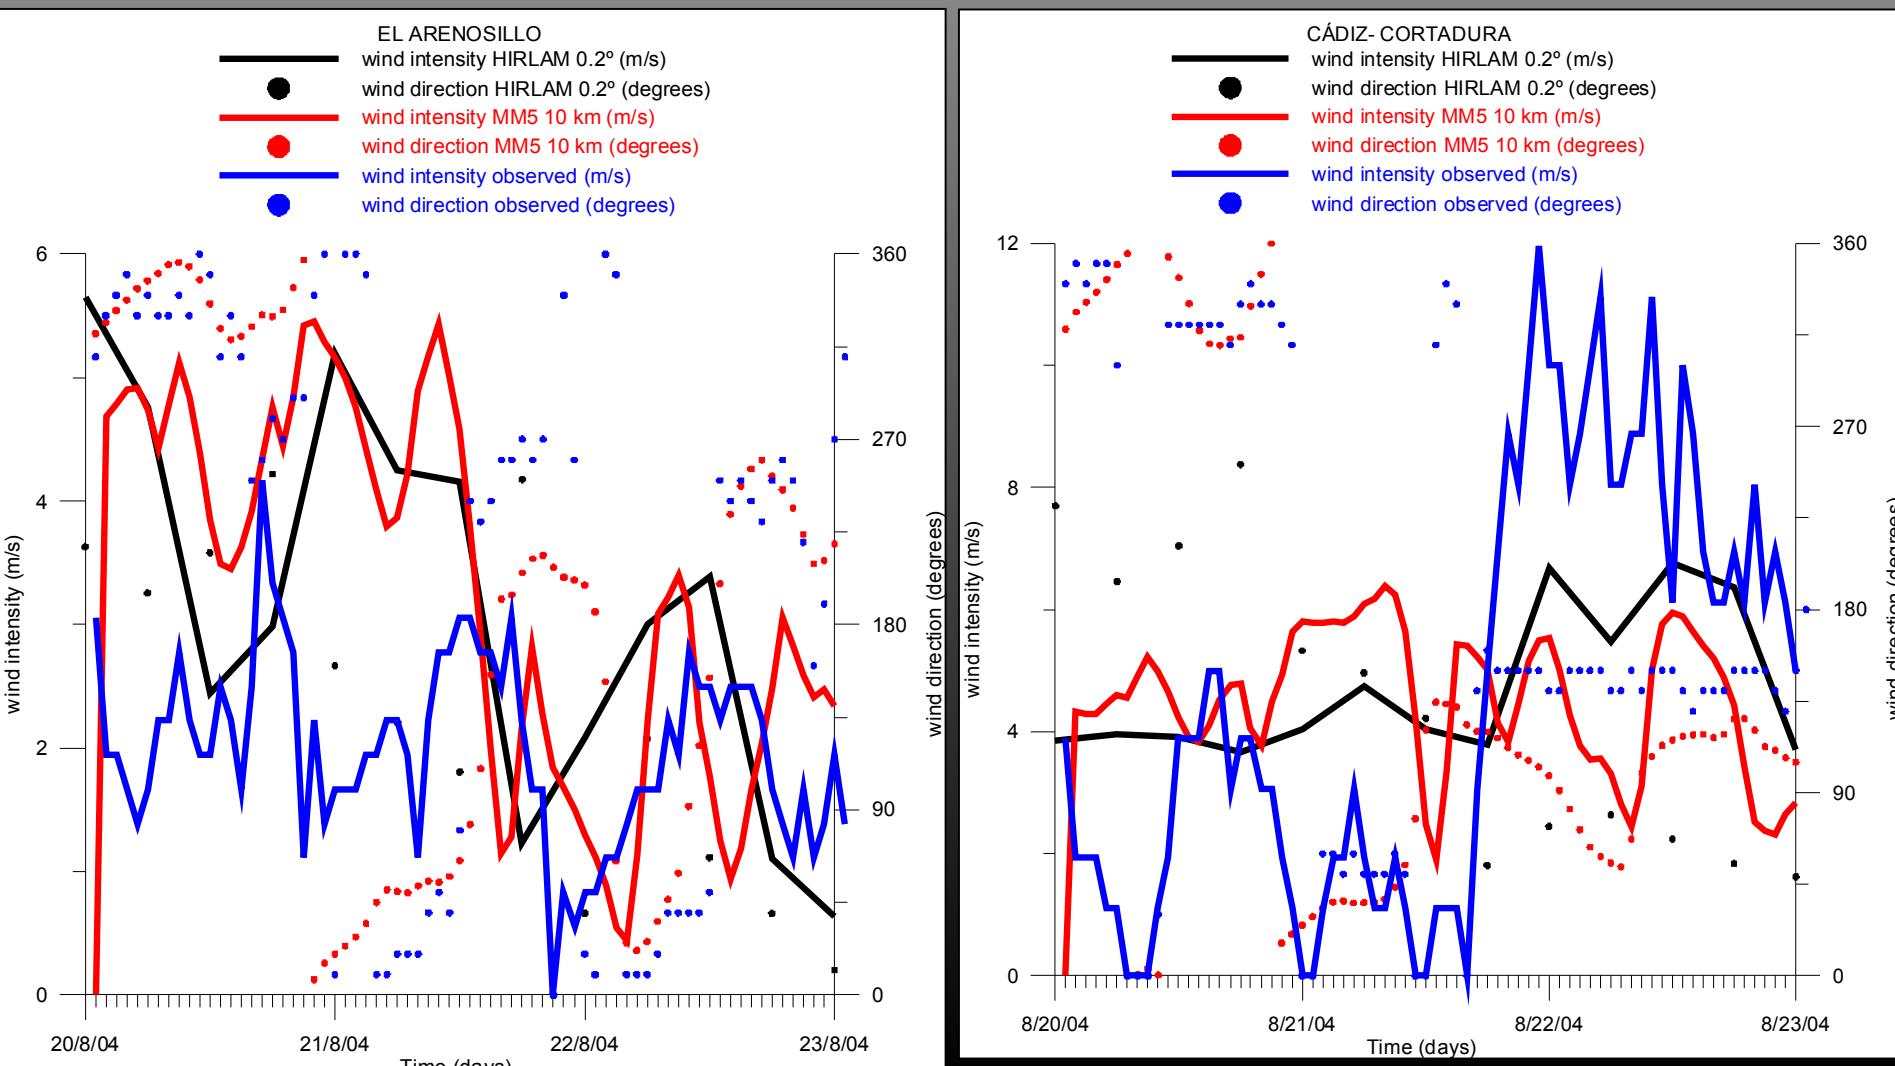

DOMAIN 30 km MM5

DOMAIN 0.2 HIRLAM (INM)

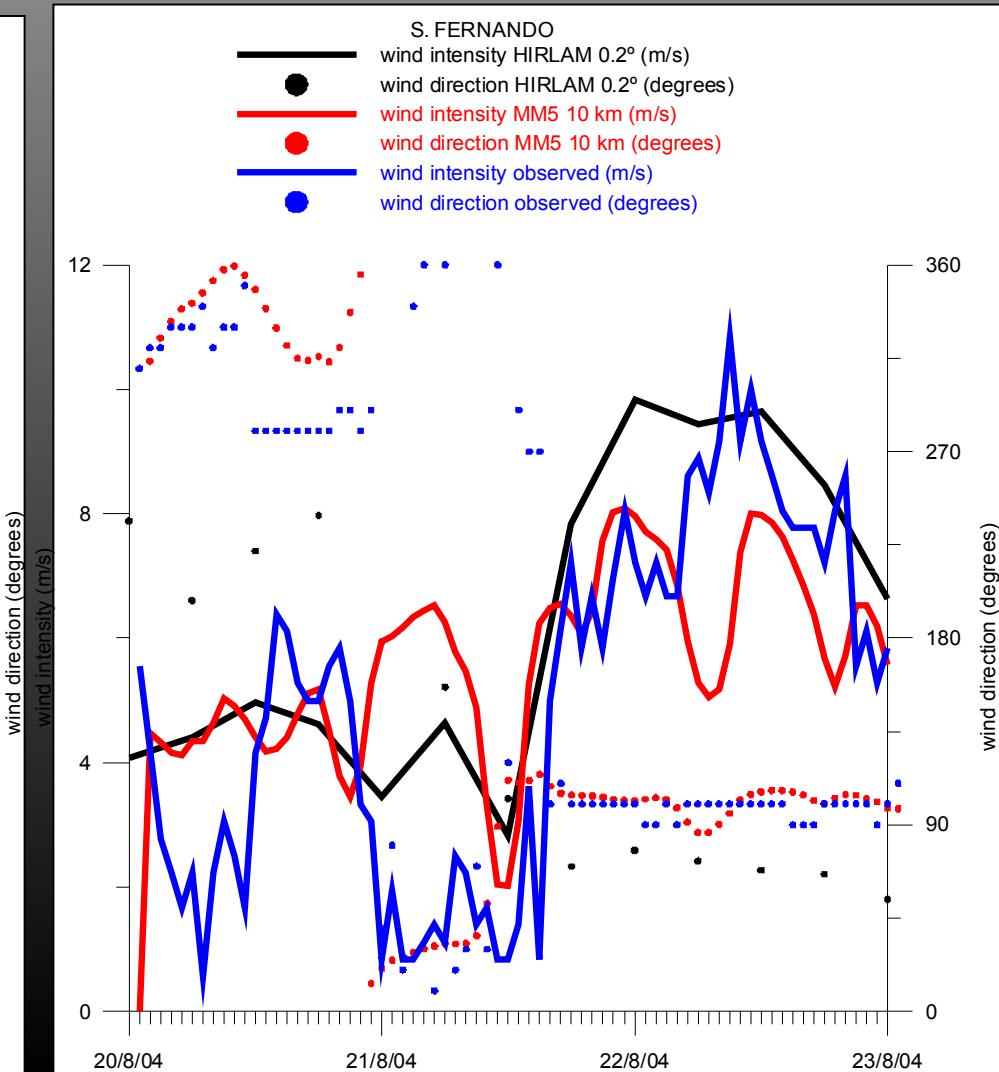

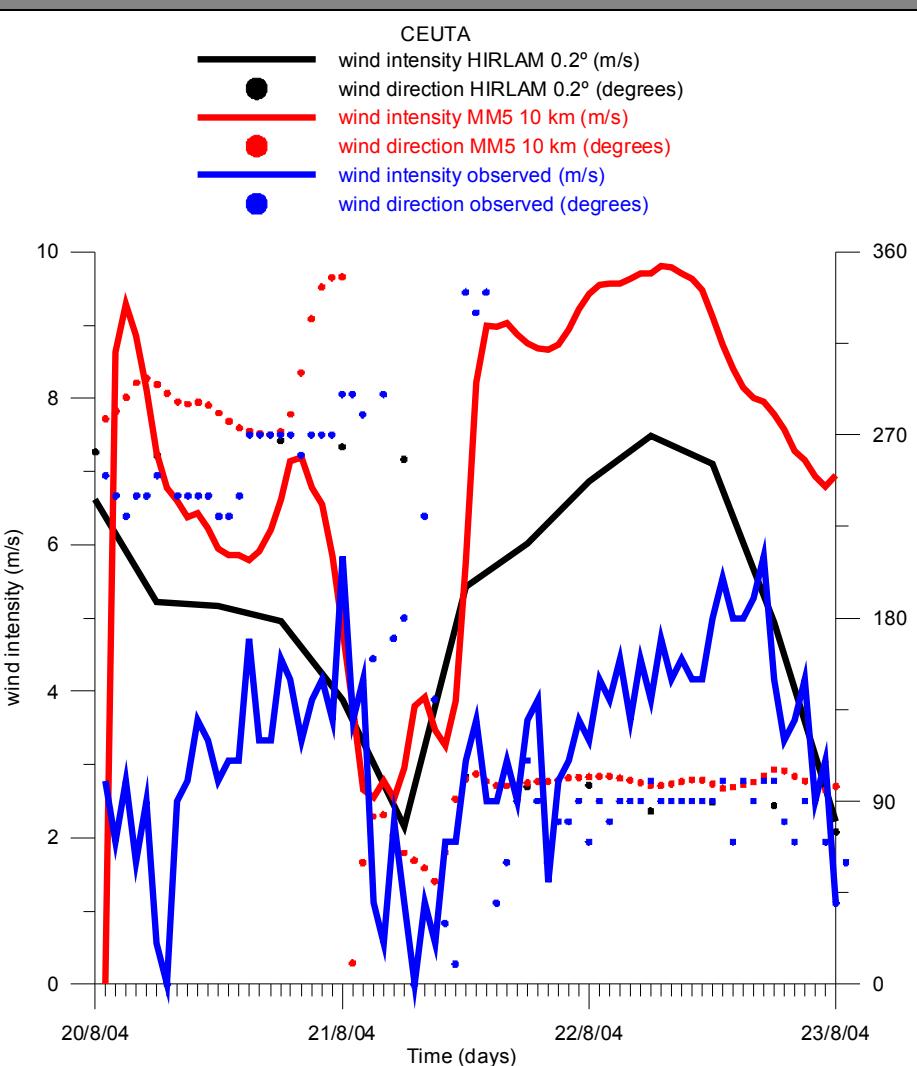

PRELIMINARY RESULTS

EVALUATION OF THE 10m WIND SPEED (m/s) MM5 (10 km) vs. HIRLAM (0.2°)

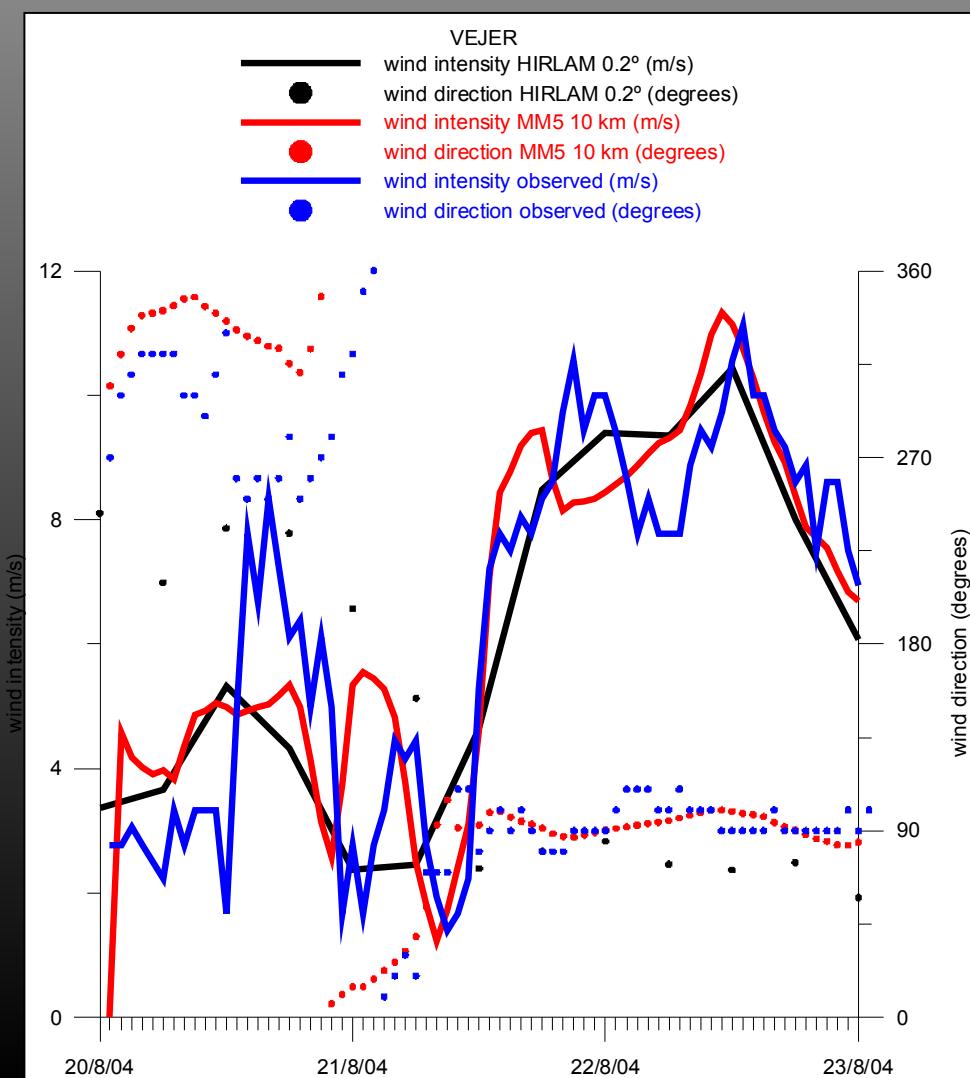

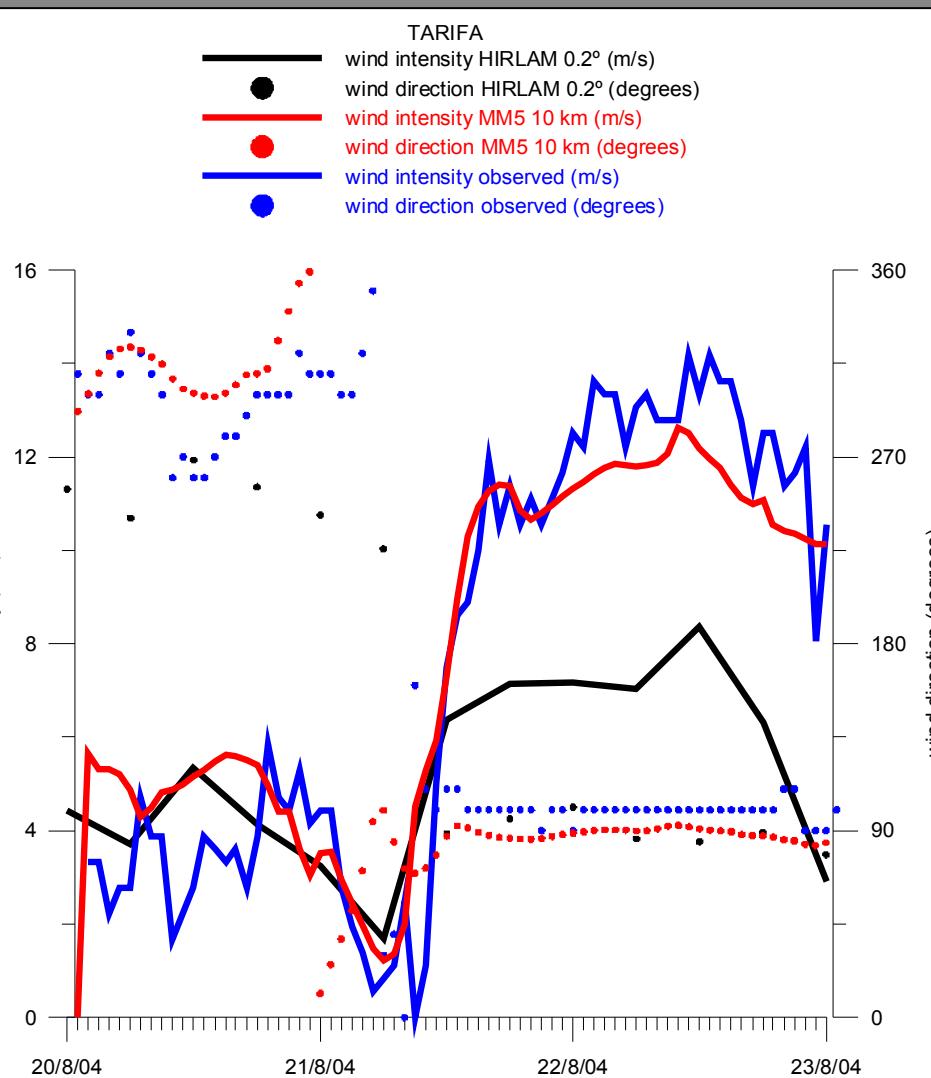

PRELIMINARY RESULTS

EVALUATION OF THE 10 m WIND SPEED (m/s) MM5 (10 km) vs. HIRLAM (0.2°)

PRELIMINARY RESULTS

EVALUATION OF THE 10 m WIND SPEED (m/s) MM5 (10 km) vs. HIRLAM (0.2°)

CONCLUDING REMARKS

- Wind direction field is well simulated for the MM5 model.
- Model may capture the magnitudes of the wind intensity changes
- The atmospheric simulation improves after the increase of the grid resolution in the case of the 2 m temperature, sea level pressure and 10 m wind speed.
- A quantitative analysis is necessary to obtain better conclusions.
- A web site with atmospheric and hydrodynamic forecast (72 hours prediction horizon) for the Strait of Gibraltar and Algeciras Bay has been developed.

<http://150.214.84.40.rshu.ru/prediccion>

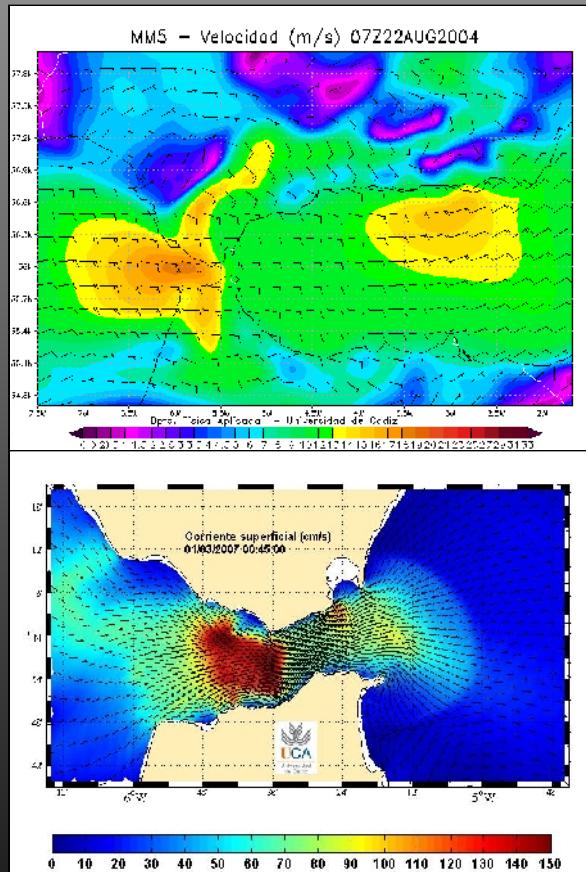

FUTURE WORK

1. Evaluation MM5
vs. observations

2. Atmosphere-
ocean model

3. Evaluation
atmosphere-
ocean model

3.4 Evaluation of all variables (T^a , pressure, wind, etc.) of the atmospheric model vs. observations (in situ, shipboard, aircraft, remote sensing) and atmospheric forcings (in the Gulf of Cádiz - Strait of Gibraltar area, including satellite data over the ocean) and vs. other models independently developed

Atmospheric
regional
model MM5
(3.3 km)

UCA2.5D
(Izquierdo et
al., 2001)

THANK TO

- MeteoGalicia group for his invaluable help, kind collaboration and boundary conditions providing.
- INM for the data support and A.M.S. maintaining
- Red Ibérica MM5 for making easier and better the work of the MM5 beginner.

THANK YOU VERY MUCH!!!

**I can not change the wind direction but
I can adjust the sails to come always to my destination**
